

REI Drilling directionally drilled several boreholes to physically detect and determine the extent of old workings mapped in the 1920's near new mine developments. Borehole 1-A was drilled until it intercepted the mine workings at 1,302 ft verifying the location as mapped. Borehole 1-B was side-tracked from 1-A and drilled between the mapped old works and the new developments to verify the extent of the workings as mapped. REI Drilling maintained the borehole in-seam with additional side-tracks in the vicinity of the mine workings. A third borehole, 1-C will be drilled to verify the orientation of the mapped old works.
